China 2024

ZTM-based Multicloud

Implementing Seamless Connectivity and
Service Governance

Introduction

China 2024

Xiaohui Zhang

Senior Architect/Technical Evangelist at Flomesh

Senior programmer, CNCF Ambassador, LFAPAC Open Source Evangelist, Microsoft MVP. Years of practical experience in microservices and cloud-native, the main work involves microservices, containers, Kubernetes, DevOps, etc.

Agenda

China 2024

- Discussion of Mutlicluster
- Multicluster Service API
- Introduce Zero Trust Mesh
- Mutlicluster Traffic Management with ZTM

Multicluster

Drivers of Multicluster

China 2024

- Geographic distribution and latency optimization
- Scale and resource isolation
- Multi-cloud and hybrid cloud strategies
- Fault isolation and disaster recovery
- Seamless upgrades reduce risk

Location

Isolation

Reliability

Single Cluster

KubeCon

CloudNativeCon

China 2024

Old Multi Cluster

New Multi Cluster

China 2024

MultiCluster Mode

China 2024

MutliCluster in Single DC

MutliCluster in Multi DCs

Flat Network: Pod-to-Pod Multicluster

China 2024

- Each pod has a unique IP address across clusters.
- All clusters have different CIDR range.

Hierarchical network: Gateway-based Multicluster

China 2024

- Handle traffic through multicluster gateways.
- Gateways are IP-reachable.
- Introduce slight latency, but noticeable.

Multicluster Service API

Multicluster Service API

China 2024

MCS API is the bridge of multicluster service discovery.

Multicluster Service API

China 2024

MCS API is the bridge of multicluster service discovery.

Zero Trust Mesh

ZTM: Zero Trust Mesh

China 2024

- Open source network infrastructure software
- For running a decentralized network
- Built upon HTTP/2 tunnels
- Run on any sort of IP networks such as LANs, containerized networks and the Internet, etc.

<https://github.com/flomesh-io/ztm>

Core Capabilities

China 2024

- Network connectivity across Internet gateways and firewalls
- TLS-encrypted communication channels
- Certificate-based authentication and access control
- Decentralized application publishing and deployment
- Decentralized file discovery and data sharing

ZTM Architecture

China 2024

- ZTM Agent: Deployed on devices connecting to the Zero Trust Network, it initiates encrypted tunnels to securely forward traffic to the ZTM Hub.
- ZTM Hub: A distributed access point cluster that establishes encrypted tunnels with Agents, enabling secure, multi-point access and high availability.

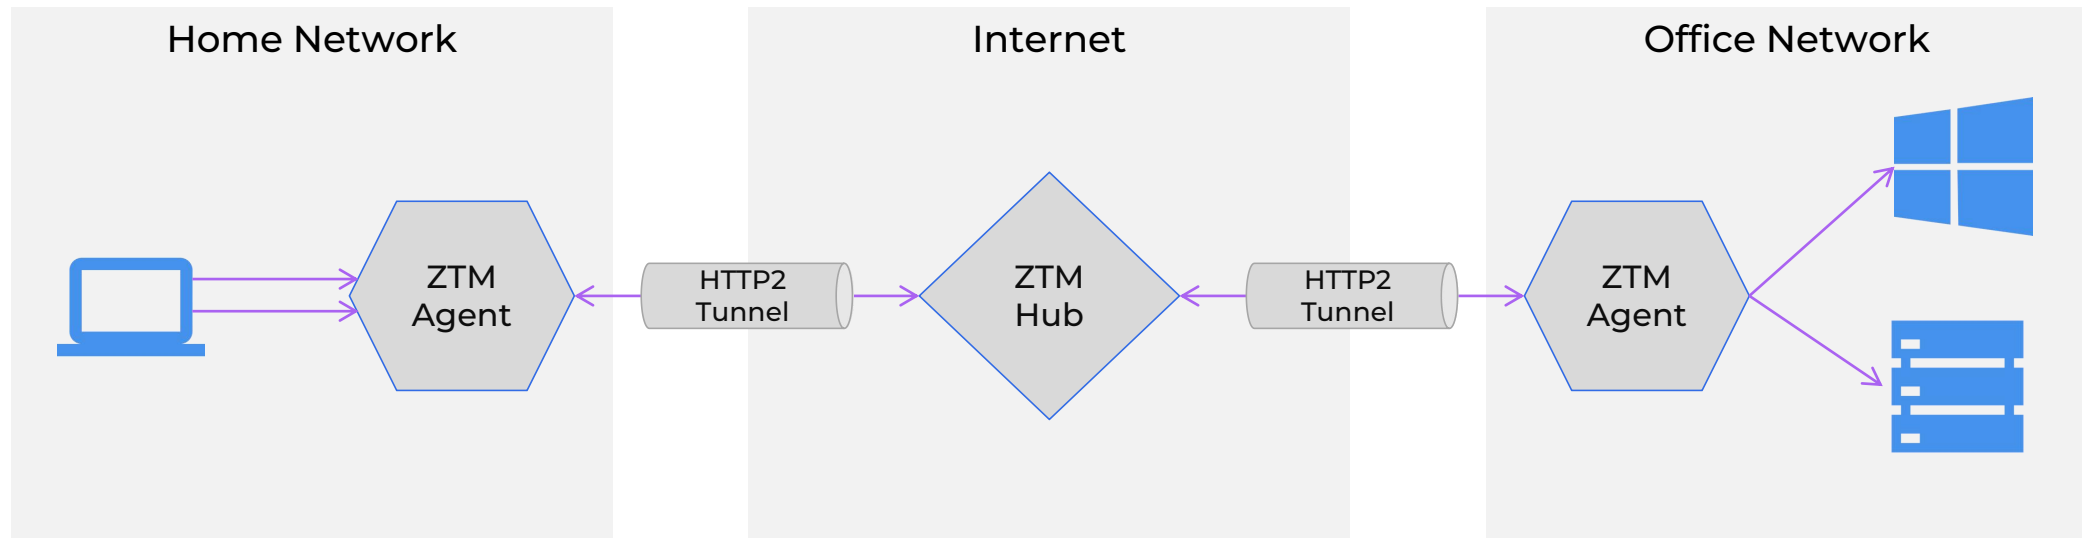

ZTM App: zt-tunnel

China 2024

The zero-trust tunnel eliminates physical distance limitations, allowing you to access your devices from anywhere.

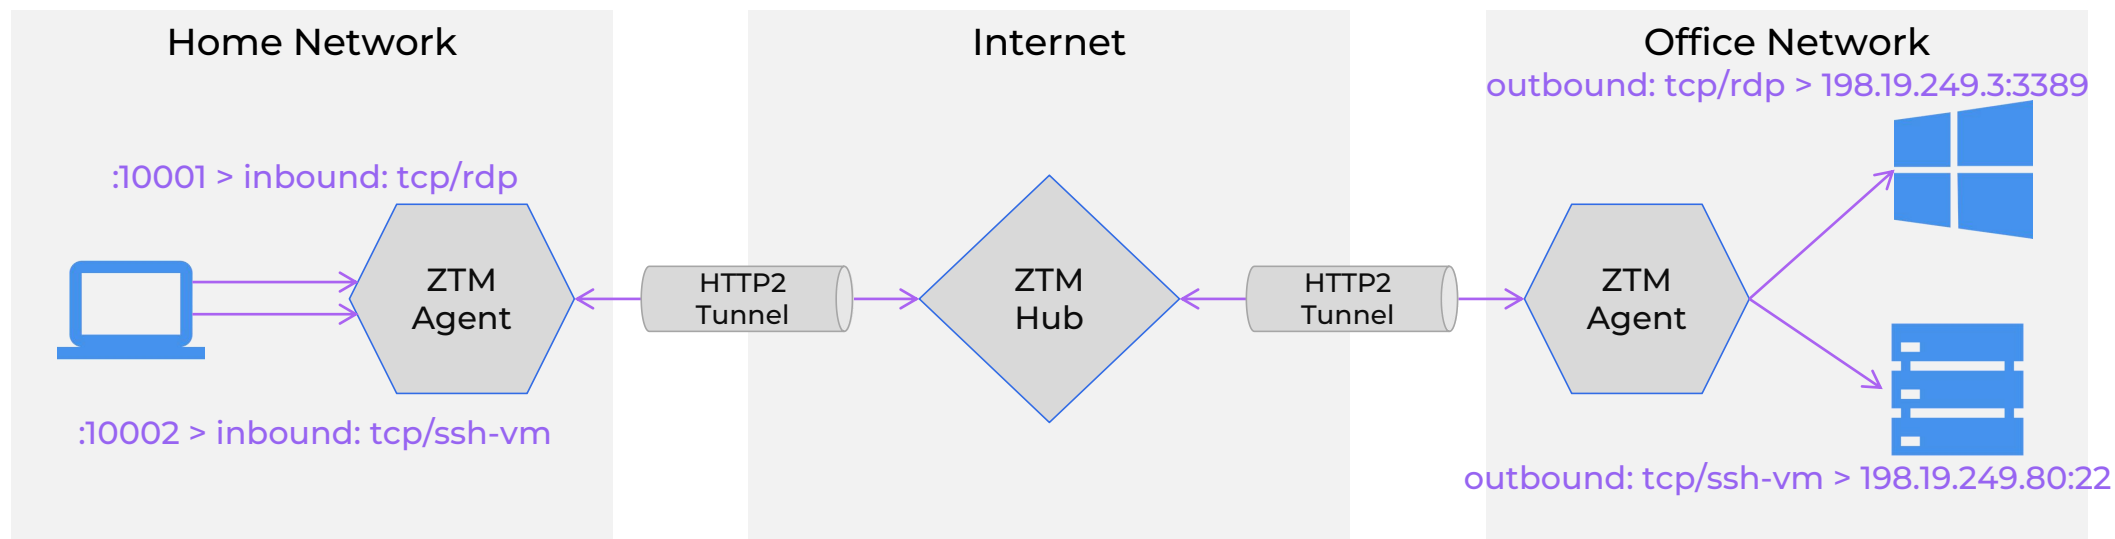

ZTM App: zt-tunnel

China 2024

Concepts:

- outbound: tunnel's exit
- inbound: tunnel's entrance

ZTM FS: Distributed File System

China 2024

Sync file to all agents in mesh network.

\$ ztm publish file /path/metadata.json

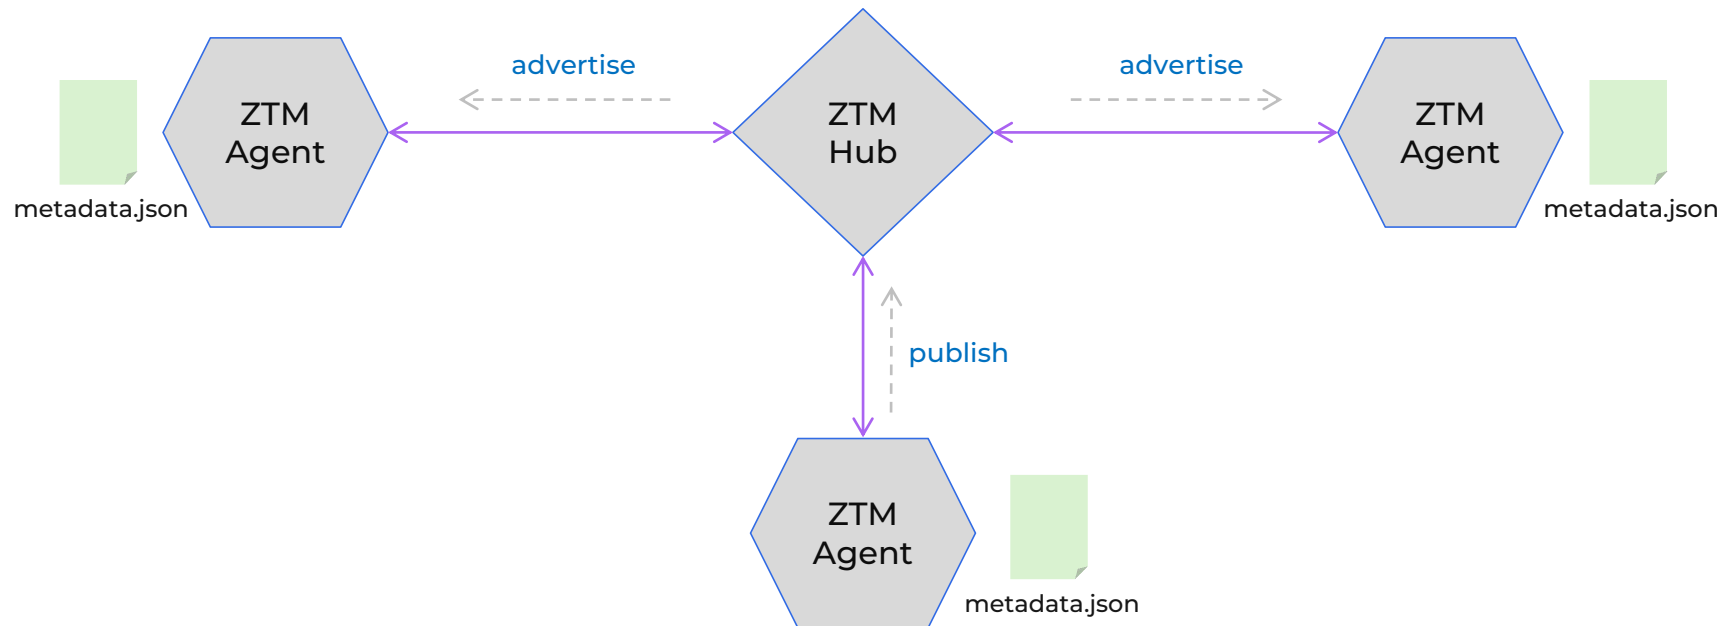

ZTM FS: Distributed File System

China 2024

Sync file to all agents in mesh network.

\$ ztm publish file /path/metadata.json

ZTM-based Multicluster

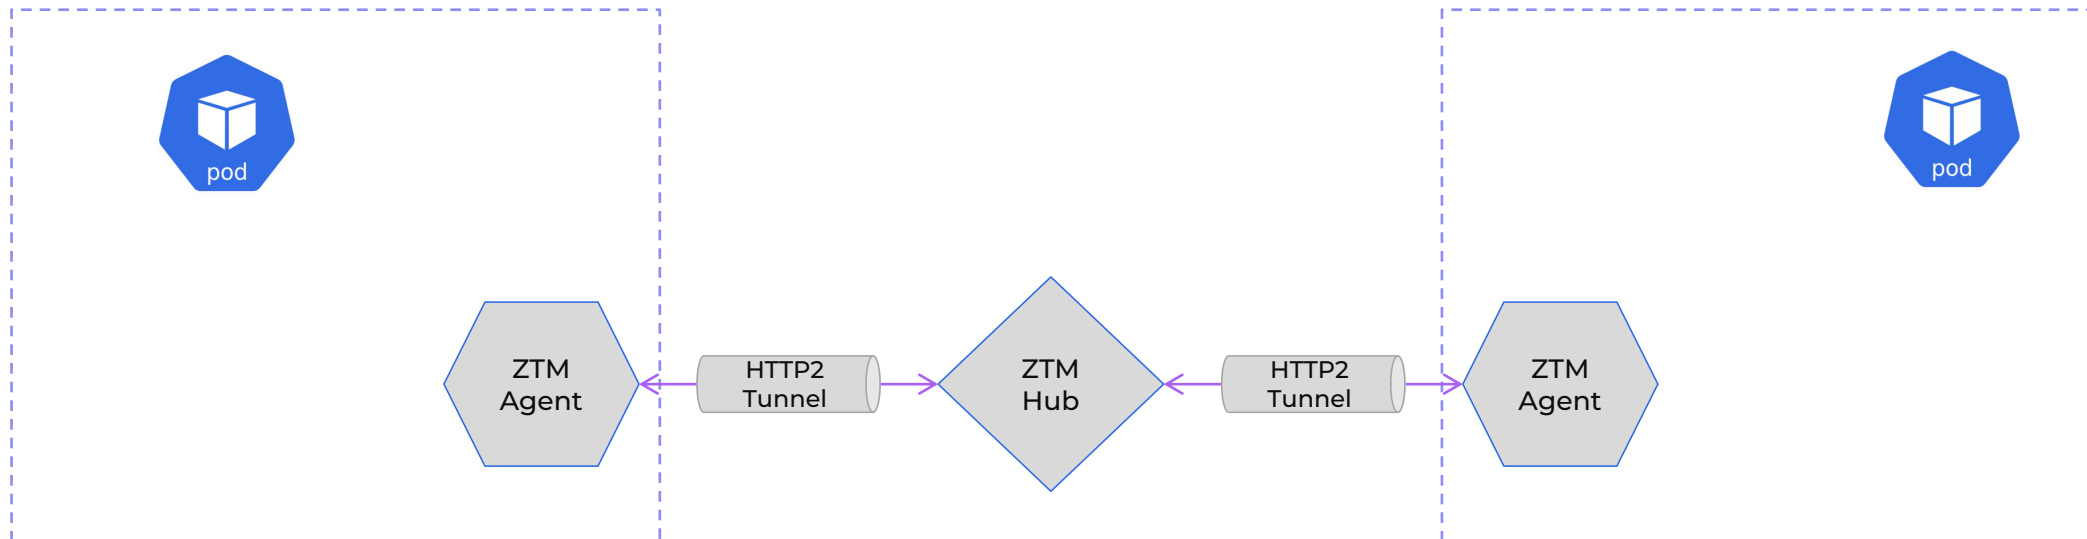

zt-tunnel in Multicluster

China 2024

Connectivity

- Secure HTTP2 tunnel
- IP-reachable (Cluster/Pod) NOT necessary

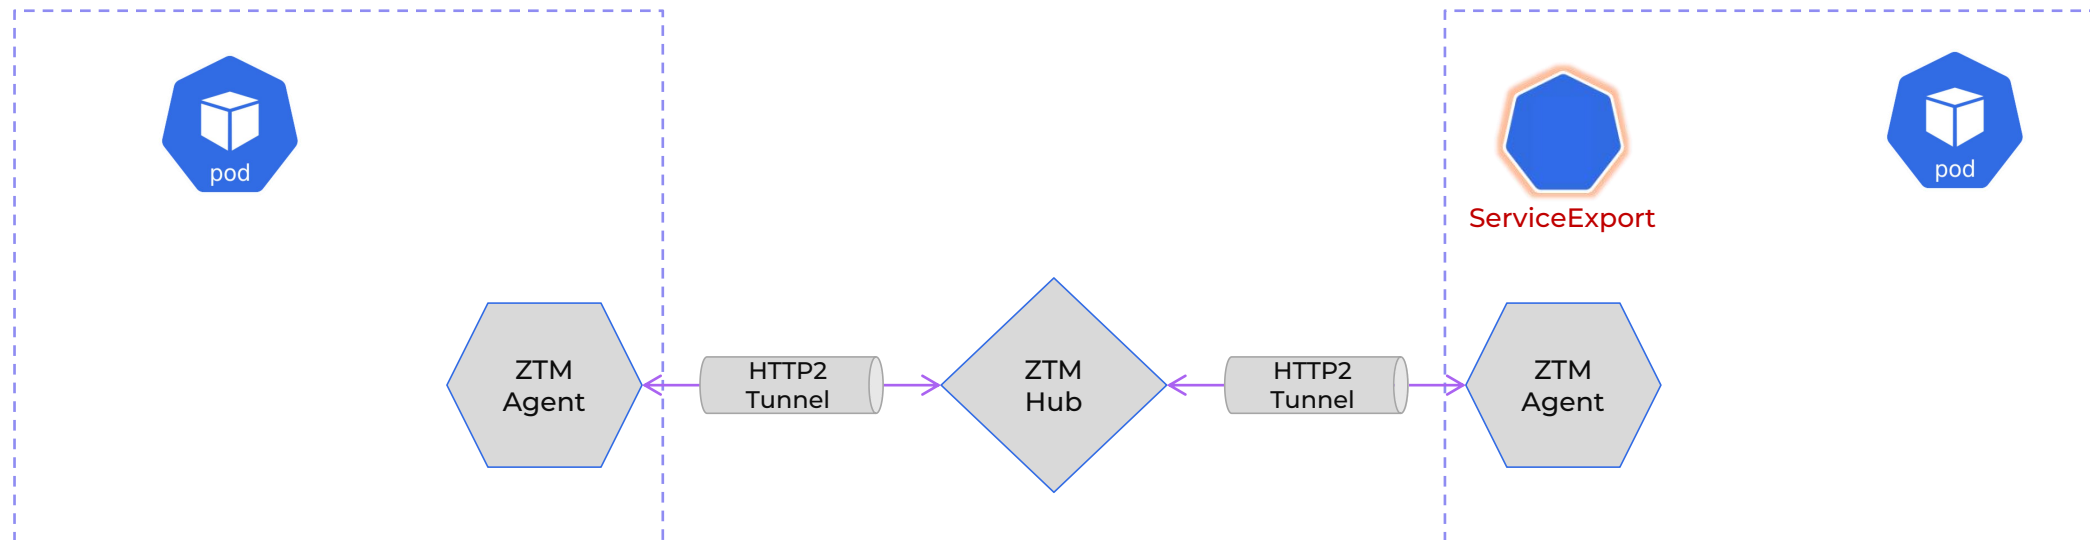

zt-tunnel in Multicluster

China 2024

Multicluster service discovery

- Compatible with the MCS API*

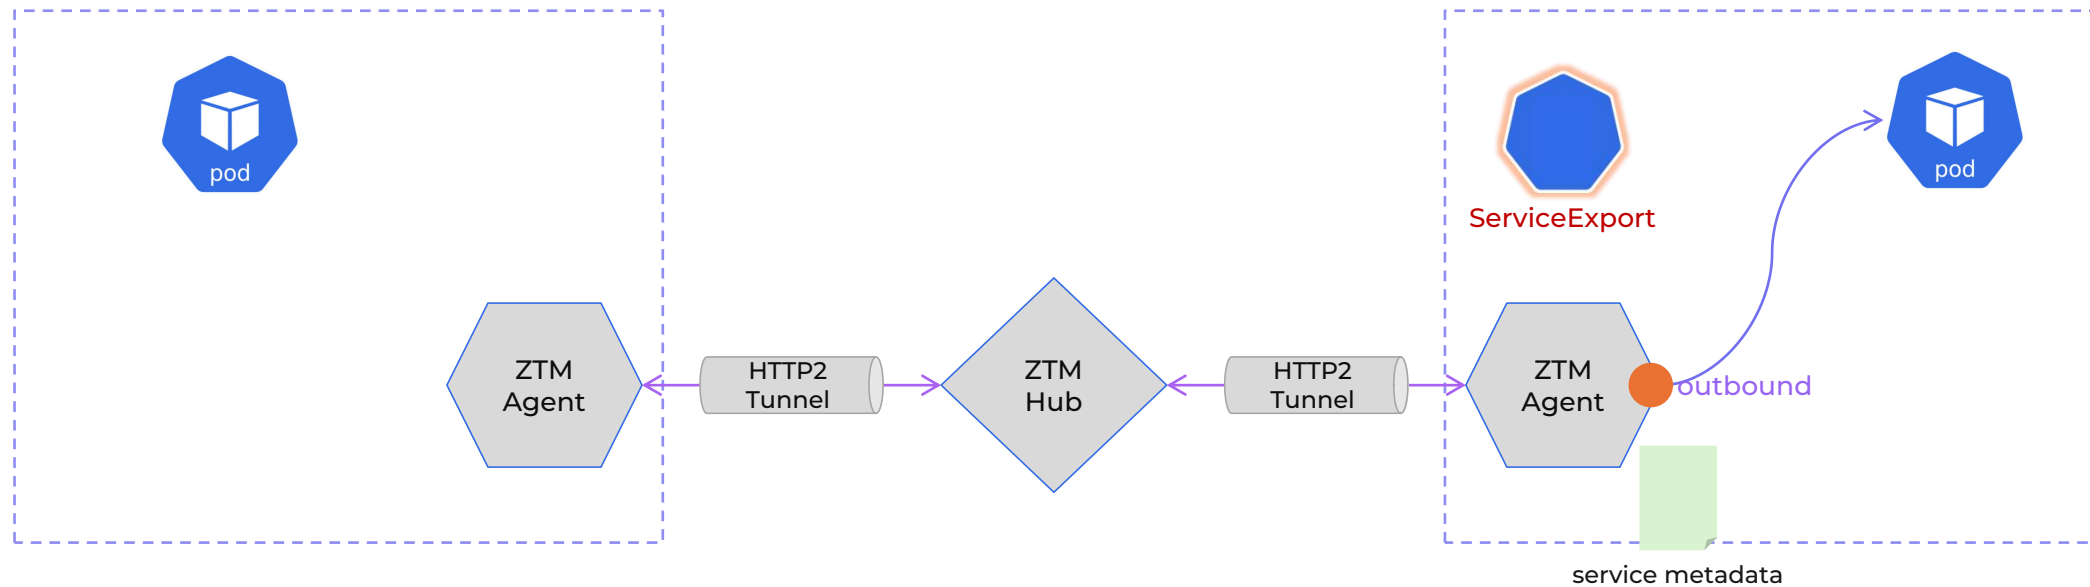

zt-tunnel in Multicluster

China 2024

Multicluster service discovery

- Compatible with the MCS API*

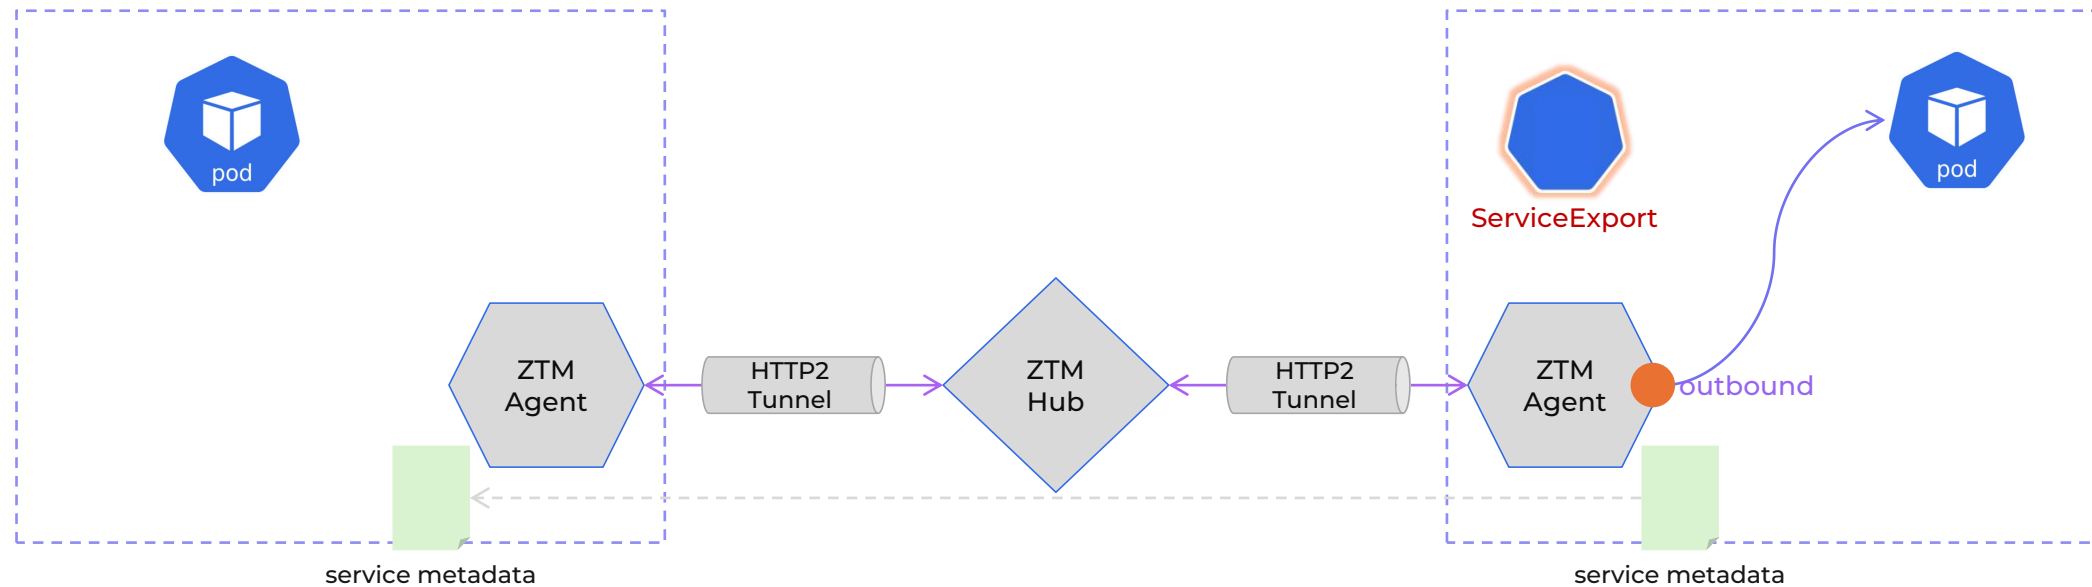

zt-tunnel in Multicluster

China 2024

Multicluster service discovery

- Compatible with the MCS API*

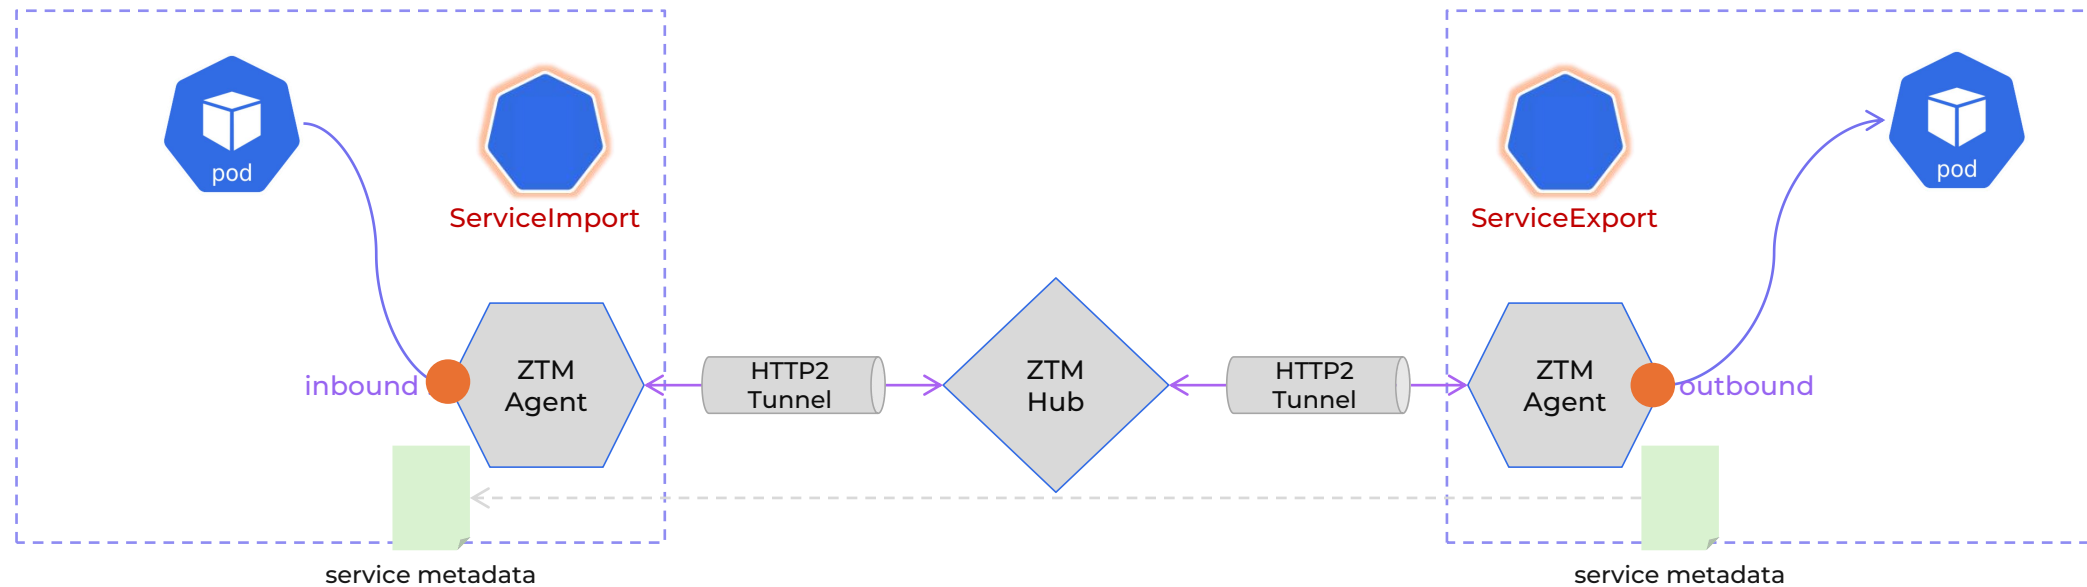

zt-tunnel in Multicluster

China 2024

Multicluster service discovery

- Compatible with the MCS API*

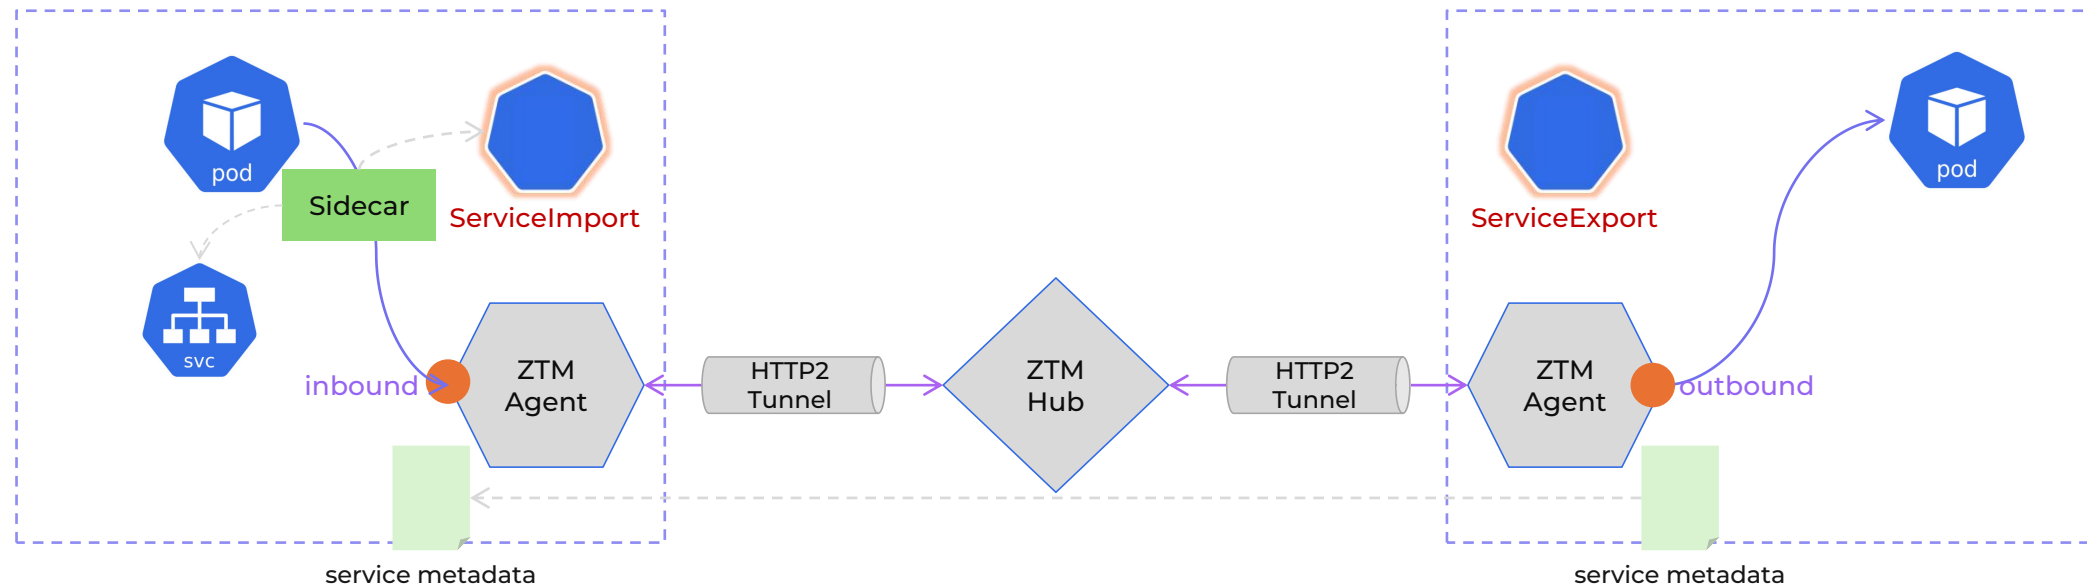

zt-tunnel in Multicluster

China 2024

Multicluster service discovery

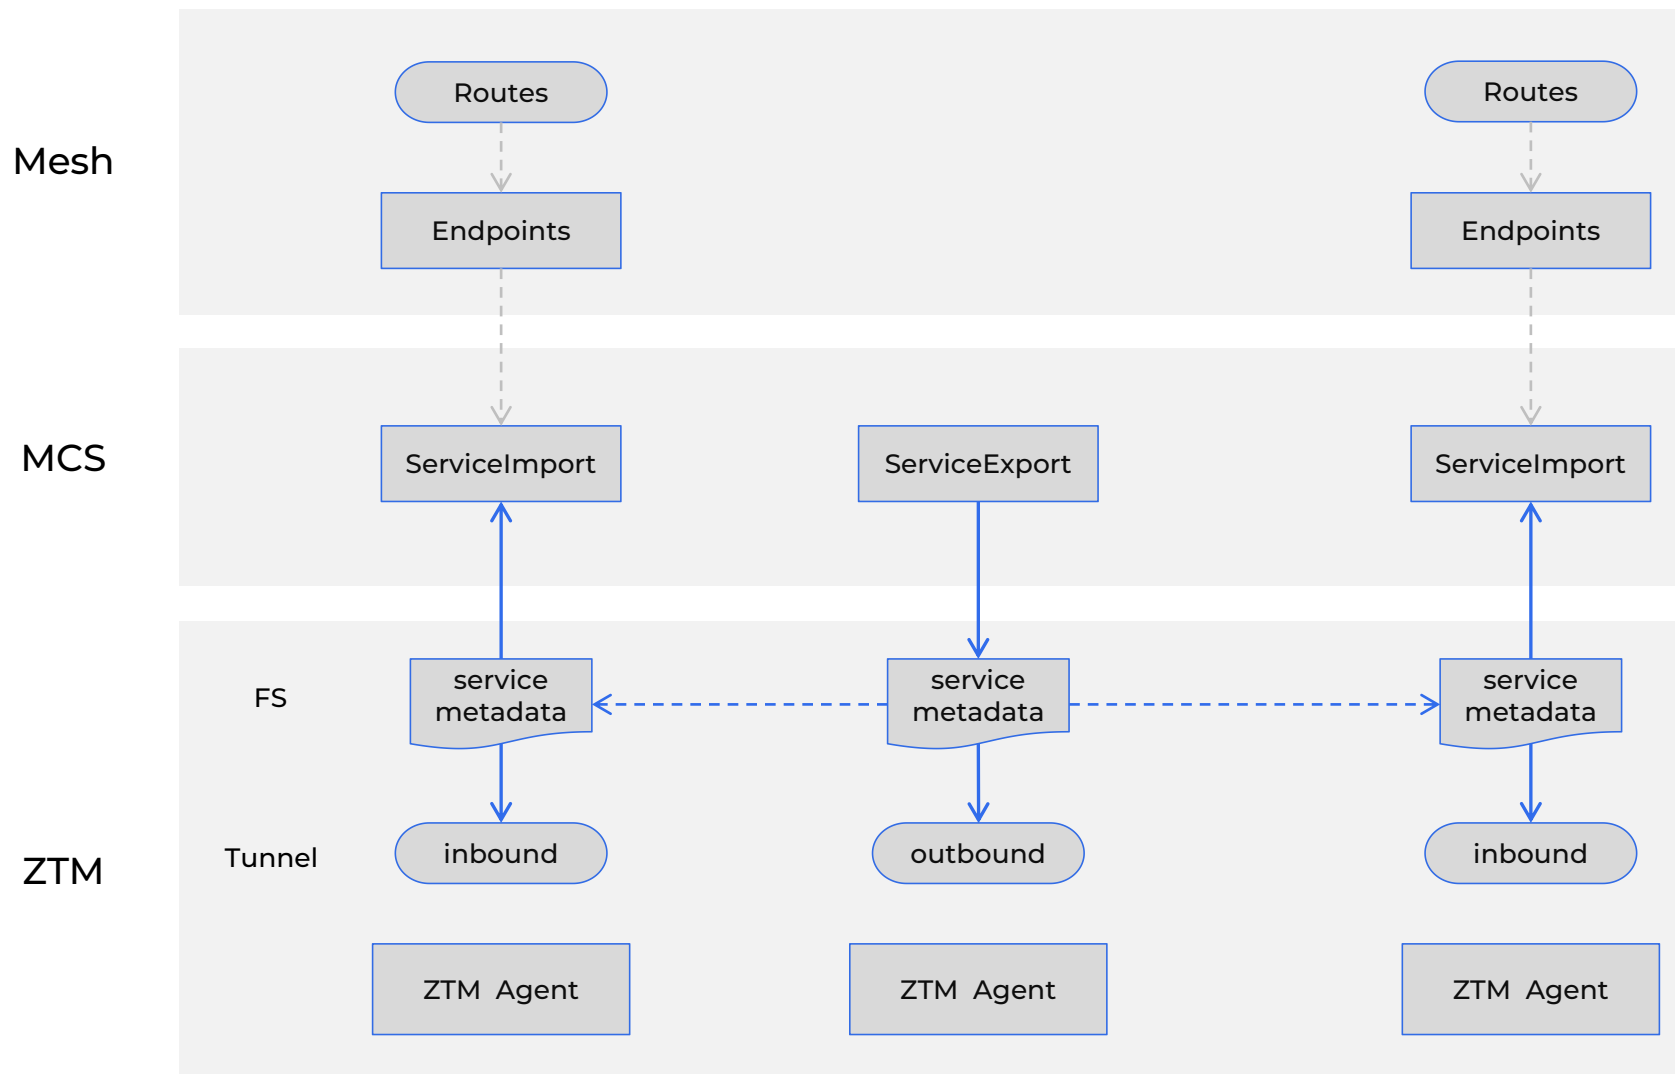

- Compatible with the MCS API*
- Interoperable with service mesh

Interoperate with service mesh

China 2024

<https://github.com/cybwang/fsm-start-demo/tree/ztm>

- Flomesh Service Mesh (FSM)
- Flomesh MCS API (L7-based)

Future

China 2024

- ZTM Hub cluster support
- Official MCS API support
- Standlone ZTM controller
